About This Document

This document contains version-specific information and last-minute additions to the standard documentation.

Requirements

For a server-side installation, TRIPcof v1.6 requires TRIPsystem v8.3. For a client-side installation (on Windows only), TRIPcof requires either TRIPnxp or TRIPjxp version 8.3.

To use HTML conversion of files other than PDF, TRIPcof requires that LibreOffice 4.4 or later is installed on the same machine with TRIPcof. For Linux deployments, note that the use of LibreOffice requires a windowing environment to be installed on the server.

A Java virtual machine (VM) for Java 17 should be installed. Use of an older Java version may result in some functionality not working as intended. For a 64-bit installation of TRIPcof, you need a 64-bit Java VM. If a suitable Java VM is not present or of the wrong type (e.g. 32-bit when you use a 64-bit TRIPcof), many file formats supported by TRIPcof will not be possible to process.

TRIPcof cannot co-exist with TRIPview or TRIPview-C, which must be completely uninstalled before TRIPcof can be utilized

Although previous / pre-release information has indicated otherwise, TRIPcof is not compatible with the TRIPview interfaces in TRIPclient and TRIPjtk.

Supported platforms are:

- RedHat Enterprise Linux, version 9.x
- Windows (x86-64) 10, Server 2019

The installation program for the Windows platforms requires Microsoft .NET Framework version 4.6.2. If not present, this must be installed separately before the TRIPcof installation can start.

Installation

Download the distribution file. On Windows, the installation program should then be run to install TRIP Connectivity Framework. On Linux and Solaris, untar the distribution archive to where you want TRIPcof to be installed, then run the cof_install.sh shell script located in the TRIPcof bin directory.

If you are installing on Windows and you already have the TRIP Connectivity Framework installed that is of version 1.3 or older, you must first uninstall it (via Add or Remove Programs in the Control Panel) before you install the new version.

Please note that from the Windows installer for TRIP Connectivity Framework requires the .NET Framework 4.6.2. If your computer lacks this, the installation will fail. If this happens, you must install the prerequisite software before you can proceed with the TRIPcof installation.
